

Potential Exposures

Exposures are determined through LHD and UDOH case investigations. Each case is mapped to a single "primary exposure". Please note that some cases have multiple potential exposures, so cases are mapped to exposures in the following order: 1) Known close contact to a confirmed case, 2) Travel in the past 14 days, 3) Healthcare (either through being a healthcare worker, patient, or visitor in a healthcare setting), 4) In-state transmission with no known contacts, 5) Under investigation. In-state transmission with no known contacts is defined as a patient with no known out of state travel, close contacts, or healthcare exposures. These exposures are commonly referred to as community spread or community transmission.

Known exposures are further broken down by type (green pie chart). "Social" refers to exposures between friends and acquaintances; "Other" refers to known contact with a lab confirmed case outside of home, work, and social settings; "Unspecified" is known contact to a confirmed case but without enough information to determine the setting of that exposure. Exposure categories are not all encompassing and may change as public health collects more data and updates analysis.

Primary Exposures by Week

Potential Exposures

Primary Investigated Exposures

Exposure	Count	Percent
Healthcare	127	2%
In-state Without Known Contact	1031	16%
Known Contact	3977	61.8%
Travel	213	3.3%
Unknown / Under Investigation	1084	16.9%

Type of Known Contact

Known Contact Type	Count	Percent
Household	2351	59.1%
Other	24	0.6%
Social	983	24.7%
Unspecified	429	10.8%
Workplace	190	4.8%
